Issue

When running a Scope activity through a Self Hosted Integration Runtime, an error is triggered:

Message=Could not load file or assembly

'Microsoft.DataTransfer.Execution.AzureDataLakeAnalyticsScopeExecutor' or one of its dependencies

Cause

We do not support Scope on SHIR currently. Because of security restrictions all Scope jobs must be submitted form one of our 2 Scope Job Pools. These will automatically be selected when using the AutoResolve IR in supported regions.

Resolution

Have end user contact PG team at adfcustomermigrate@microsoft.com for assistance
