Maintenance event outside of maintenance window

Did you notice a connectivity glitch or unavailability signal outside of the maintenance window?
This may happen because of:

- Hardware failure (unplanned failover)

- [Instance management operation](#) ⧉

- [User-initiated failover](#) ⧉

- In very rare circumstances, this occurs because of an urgent security patch that couldn't be postponed until the next maintenance window.

Recommended Steps

1. Check the [Resource Health history](#) ⧉ of your database for more details

Recommended Documents

- [About maintenance window](#) ⧉

- [Frequently asked questions about maintenance window](#) ⧉

- [Prepare for maintenance events](#) ⧉
