Issue

When customers use ADF dataflow to move SAP data (full/initial/delta load) into expected sink store, if source data contains line separator "\r\n" in data value, then data will be wrongly split into 2 rows.

Resolution

1. For existed dataflow activity, manually add following key-value (**enableMultiLineRow:true**) into DSL of SAP source, then save/publish it to run the activity.

```
source(output(
        MOVIEID as integer,
        TITLE as string,
        RELEASEDATE as string,
        RATED as string,
        PRICE as string
    ),
    allowSchemaDrift: true,
    validateSchema: false,
    enableMultiLineRow:true,
    store: 'SapOdp',
    format: 'sapObject',
    staged: true,
    context: 'SLT~MURALI',
    objectName: 'ZMOVIES',
    readMode: 'incrementalLoad',
    enableCdc: true,
    keys: ['MOVIEID']) ~> sapSource1115
```
