## Resource Health is reported as unkown.

Most users are able to resolve their issue regarding "unknown" status using the steps below.

### Recommended Steps

1. If the datafactory has any runs exisitng, the resource health reported for the factory should NOT be "unknown".
2. If unknown status is reported, please update the factory from Azure portal by simply adding a temporary tag ⧉, as the first troubleshooting step.
3. After the factory update, resource health status of the factory should update accordingly based on success or failure percentage of runs in factory.
4. If the status reported by resource health is still "unknown", please create AVA.
