Geo-DR - REPL Monitor and Alerts

Last updated by | Vitor Tomaz | Aug 5, 2020 at 12:41 PM PDT

Informed by PG:

Monitoring of geo replication can be done using DMVs: https://docs.microsoft.com/en-us/sql/relational-databases/system-dynamic-management-views/sys-dm-geo-replication-link-status-azure-sql-database

For monitoring size of transaction log: https://docs.microsoft.com/en-us/sql/relational-databases/system-dynamic-management-views/sys-dm-db-log-space-usage-transact-sql

There are no alerts/events around this that the customer can subscribe notification to. We will take that feedback and put it in as a feature request. The SQL team internally has our own monitoring and alerting around GeoDR secondary holding-up log truncation.

How good have you found this content?
