SME	Sundar Easwaran; Brian Wang
Symptoms	Customer noticing the other Data Factories (Different Tenant) while attempting to Share the SHIR from ADF Author & Monitor UI | Connections | Integration Runtime
Feedback	• The SHIR cannot be **shared cross tenant**. But the feature (resource search) here is not actually implemented by ADF. The result is from AAD (Azure Active Directory)
More Information	The list is pulled based on the Applications under Service Principal of the Tenant ID. The list consists all the applications not just limited to Data Factories under that Subscription. *https://servicedesk.microsoft.com/#/customer/cases?caseNumber=120012425000340*
