SME	()

Symptoms	**Customer wants to read data from SAP Table while finding that it failed with error like this:** Failed to invoke function XXXXXx with error: SAP.Middleware.Connector.RfcAbapRuntimeException
	
	Kusto Query:
	`CustomLogEvent`
	`| where ActivityId == <InputActivityId>`
	`| where Message contains 'SAP.Middleware.Connector.RfcAbapRuntimeException'`

Cause	This is because there is exception thrown from the undernearth SAP RFC function module that we are depending on.

Resolution	Customer needs to troubleshoot from their SAP side via SAP GUI, Here are the rough steps
	    1. Follow TSG
	       https://supportability.visualstudio.com/AzureDataFactory/_wiki/wikis/AzureDataFactory/640905/-SAP-Table-SAP-OpenHub-Repro-issue-in-SAP-system
	    2. Then customer should be able to replicate the issue without any ADF service involved.

Created with Microsoft OneNote 2016.
