Contents

Scenario

The client is asking about IP address ...** - It is not on the published Azure IP address list. ADF is using this address for communications with client's systems and networks. And the client is wondering why this IP address isn't on the published list? And how he can safely whitelist ADF IP addresses. Because using published lists is not sufficient, it appears.

Recommendation

In dataflow fixed IP address range is not supported, so customers can't take the benefit of the fixed IP address.
