# Deploy support file with ADF UI

Last updated by | Jackie Huang | Jan 4, 2022 at 12:24 AM PST

ADF UI has integrated resource creation from a set of support files feature with a first-class UI experience. Follow the below steps to try it out in your machine.

Important! This feature facilitates efficient trouble shooting work flow for engineers and CSS when dealing with CRIs, and is behind a feature flag. **Do not share with the customers.**

1. Got to ADF UI with URL https://adf.azure.com/?feature.showImportFromSupportFiles=true ⧉
2. Select a data factory
3. Click Add button in resource explorer, and you'll see a new button showing up as the following screenshot manifests.

Note: Before importing resources, make sure there's no resources with the same name existing in your data factory. Name conflict checking will be introduced in the next sprints per feedback.
