More Information

The ML Service is only for "Managed Instance" and not Azure SQL Database.

In Azure SQL Database we had this feature in preview earlier which will not be released for GA. "As of 30 June 2020, Azure SQL Database Machine Learning Services with R (preview) - support will be discontinued and the preview will not be released for general availability. R scripts in use after 30 June 2020 will not work" See here ⧉

To continue working with machine learning in Azure SQL, see Machine Learning Services in Azure SQL Managed Instance ⧉
