Contents

Issue

User is unable to save Advance Data Security settings while selecting storage.

The operation fails with error "Failed to save Advanced Data Security Settings. An unexpected error occurred while processing the request. Tracking ID:ahbfewb-wecfwecwe-ewcwecew"

Mitigation

There is an issue in managed instances where creating the managed identity fails in some cases using REST API, and this affects other features in the portal.

A fix is being pushed from managed instance team and will be deployed within a few weeks, we do not have an ETA as now.

To work around this, please execute the following powershell command:

Set-AzSqlInstance <managed_instance_name> -ResourceGroupName <resource_group> -AssignIdentity

Once the command is executed successfully, then you should be able to save Advanced Data Security using the portal.
