Issue

Customer was using CDM with model.json generated by PowerBI. While previewing the CDM data using Dataflow Preview, customer was getting an error : No output data

Investigation

We checked the model.json generated by PowerBI dataflow, and noticed in the paritions:

"partitions": [
{
"name": "Part001",
"refreshTime": "2020-10-02T13:26:10.7624605+00:00",
"location": "https://datalakegen2.dfs.core.windows.net/powerbi/salesEntities/salesPerfByYear.csv ☒
@snapshot=2020-10-02T13:26:10.6681248Z"
}

Resolution

For this model.json, the issue is the naming scheme of the data partition file itself. It has special characters. Please have the customer try to remove the "@snapshot=2020-10-02T13:26:10.6681248Z" part from their data partition file name, as well as the model.json, and then try again. This is a part of the ongoing efforts that we have with PowerBI to make their data partition naming scheme compatible with ADF.

We don't have supporting file paths with '@' in path in near term.
