Web Activity adds a 'Z' in the API call request body which fails web activity

Contents

Symptom

Web activity automatically adds a 'Z' if the request body of the API call has a timestamp. For Eg if the body is like below,

```
"body":
{
    "Date":"2022-05-10T03:53:47"
}
```

ADF would actually turn it into

```
"body":
{
    "Date":"2022-05-10T03:53:47Z"
}
```

This would sometimes fail the web activity call and Customer might see custom errors depending on how their APIs are implemented

Cause

"z" is added when a timestamp value is serialized to Cosmos DB, internally when ADF is processing the data

Next steps

Currently this issue does not have any workaround, PG is having a work item in the backlog and there is no ETA
