Issue

Customer was trying to create ADF Pipeline Run using Web Activity, and it was failing with the following error:

errorCode": "2108", "message": "{"error":{"code":"**AuthorizationFailed**","message":"The client '6991766e-xxxx-xxxx-xxxx-b1cffe4fdbe9' with object id '6991766e-xxxx-xxxx-xxxx-b1cffe4fdbe9' does not have authorization to perform action 'Microsoft.DataFactory/factories/pipelines/createRun/action' over scope '/subscriptions/54b875xx-xxxx-xxxx-xxxx-1a36bc7ddf4d/resourceGroups/xxxxxxxxx/providers/Microsoft.DataFactory/factories/xxxxxxxxx/pipelines/xxxxxxxx' or the scope is invalid. If access was recently granted, please refresh your credentials."}}", "failureType": "UserError",

Resolution

Please ensure that the Azure AD app that is being used to make OAuth token request in the web activity has the contributor role at least at the ADF resource, that's why triggering the run is failing with the permission error.

You need to add the appId as contributor in the access control blade in your ADF resource (can do it at the resource group level as well, so the permissions are inherited to the resources in the RG).
