How to remove the properties or resources from Target DF with Incremental mode in CICD

Last updated by | Jackie Huang | Jan 4, 2022 at 12:24 AM PST

Contents

Problem

If customer choose Incremental Mode in CI-CD, there will be no deletes in the target environment, there will be only updates to the target.

Recommendation

At this moment, we can achieve this by using custom tasks in CI-CD release pipeline.

Below is the sample screenshot.

The below Custom Powershell script evaluate the existing properties in target and match with the new json from build and remove those properties from target DF environment.

[Powershell Script](#)

Note: Please note that the customer should aware of how he/she want to use this script as it may remove the properties from DF.

More scripts are available in this [CICD Public doc](#) ⧉.
